## **Amerisoft-Water Introduces the Smallest Mobile Water Softener**

*The mobile water softener is easy to carry and goes where you go, giving RV and Marine travelers more 'at-home' luxuries*

BLOOMINGTON, Ill. – Having soft water shouldn't be limited to your home. For the first time, Boat and RV owners can enjoy soft water on the go with minimal space requirements. Amerisoft-Water is introducing the truly portable mobile water softener using a patented high flow ion exchange resin. The softeners come in 3 sizes that easily hook up to your water inlet hose similar to installing a water hose sprinkler. No large equipment, heavy salt bags or messy brine tanks and best of all, no more hard water spots.

The in-line mobile softener works just like conventional water softeners by providing soft water on demand for both exterior and interior water sources. The difference however is in mobility. Amerisoft-Water comes in three sizes, ranging from 18" (similar in size to a tall bottle of wine) to 36" in length (similar in size to 3 stacked rolls of paper towel). Amerisoft-Water Softeners use a patented high flow ion exchange resin, which means more soft water with less cost.

Many RV and Boat users have turned to filters to help improve water taste and odor. Amerisoft-Water Softeners make the filters and Reverse Osmosis Systems work better and longer. Unlike water filters and membranes, Amerisoft-Water Softeners are reusable and are designed for years of service. More times than not, RV Parks and Marinas are located in known hard water areas which take a toll on fresh water systems, degrading plumbing systems and leading to costly repairs. Research indicates that repairs are reduced by as much as a third when owners use a mobile softener system. Plus, unlike most water filters that are disposable, Amerisoft-Water Softeners are reusable and last for years. Additionally they help the filter and RO systems work more efficiently.

"Hard water is typical in many rural areas in the Western and Southern parts of the U.S., which aligns with many inland rivers where marinas and RV grounds are located, so we've developed a system that gives Marine and RV owners a chance to have better water quality when they are away from home," said Mike Thompson, with Amerisoft-Water Mobile Water Softeners.
